

ELECTRONIC CANDLES

Product Sheet & Installation Guide

HOW IT WORKS

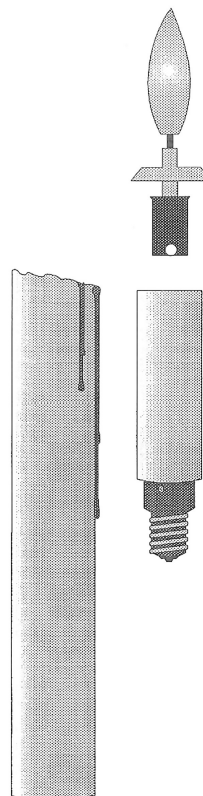

The secret of Feeling's Flame lies in the gentle movement and flickering of the 'flame', created by a magnetic impulse. The impulse is generated within an electronic switch circuit and passed on to a pendulum — the flame itself — causing it to flicker in a natural, lifelike way.

Feeling's Flame consists of an electronic body fitted to a standard base available as E14 for Europe (230/240V).

INSTALLATION INSTRUCTIONS

1. Remove the old bulb from the fitting.
2. Screw the electronic body into the socket.
3. Place the Feeling's Flame bulb into the electronic body.

It cannot be easier.
